Fumigation

By Dave Mueller
President/Entomologist

Fumigating seed warehouses with Dow's ProFume™ gas fumigant requires equipment and special training. ProFume is an excellent penetrating fumigant that does not cause corrosion.

Mission Statement

In all, our aim is to strive for quality service, provide the absolute best products available worldwide, to be a respected world-class organization, and maintain profitability with innovation, alternatives, and education.

Monitoring Indian Meal Moth

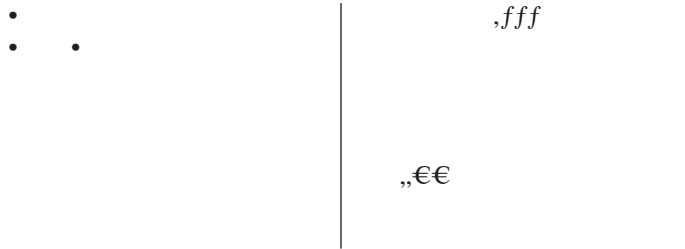

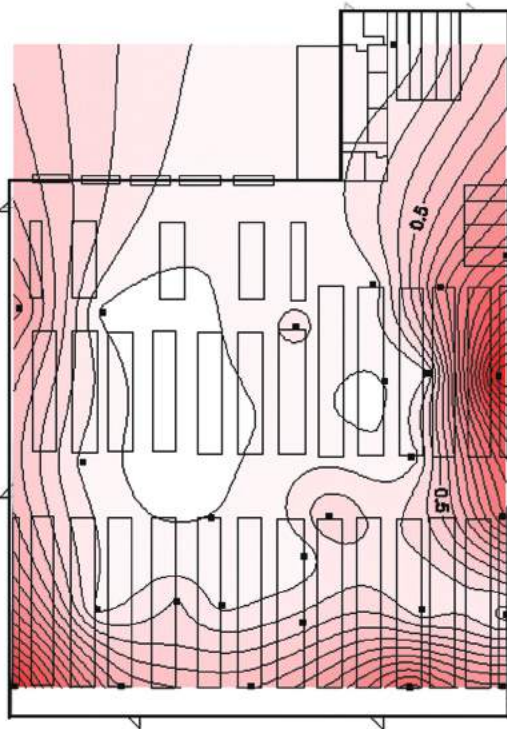

Indian meal moth.

By Pete Mueller
Central Illinois Regional Manager

It is important to place pheromone traps throughout the warehouse. These male Indian meal moths caught in the trap are coming to a Bullet Lure that mimics the smell of a female moth. This sensitive monitoring device can offer valuable information on the population of this major seed and grain pest.

This contour map (left) shows the density of Indian meal moths in a seed warehouse. Infested in bound super sacks of seed corn (above) were stored near the right wall.

For more information on how to start a pheromone trapping program, a pheromone mating disruption program, or a fumigation program, contact Pete Mueller at tel. 309.830.9386 or p.mueller@fumigationzone.com, www.fumigationzone.com

Empty Bin Spraying

Merle Bennett
Sales Manager
